
Quiz

1. [3 pts] Write HTML and CSS files that style 7 elements using the following methods, one method per element:
 - “In-line style” as an element’s attribute
 - Using the selectors `class`, `id`, `universal` in the CSS file
 - Using the same selectors inside a `<style>` block in the HTML file
2. [2 pts] Write JS & HTML files, with all JS code in the JS file.
 - A. In JS, write 3 functions `A(x,y)`, `B(m)`, `C(n)`, where `x`, `y`, `m`, `n` are parameters, but pick more descriptive function and param names.
 - B. Write JS that automatically runs when HTML loads; the “auto-run” code must call A with two params, and A must call B and C with one param each.
 - C. In each JS function, use `console.log()` to print the function’s name and its parameter name(s) and value(s).
3. [+1 pt. extra credit]: In bash, what do each of the following
`rmdir`, `cat`, `less`, `ln`, `file`, `which`, `du`, `df`, `top`
4. [+1 pt. extra credit]: What is a shell (e.g., bash)? Name a shell that is similar to bash, and list two differences between that shell and bash. Example: zsh “zee-shell” (but don’t pick zsh).
